Inter-University Cooperation between Russia and China in Developing Educational Programs in Architecture and Design

Key words and phrases: architecture; design; education; engineering; university.

Abstract: The paper considers the main directions of inter-university cooperation between Russia and China in developing educational programs in the field of architecture and design. Close relations between Russia and China have now reached unprecedented levels. These relationships are supported by numerous bilateral agreements between the two countries in the field of culture. During the existence of diplomatic relations the two sides signed a lot of different treaties and agreements affecting all spheres of interstate cooperation. We can say that Russian universities welcome foreign students (especially from China. Russia is striving to create real support mechanisms for the development of institutional environment and further fruitful cooperation between Russian universities and Chinese partners. At present, relations between China and Russia have become an example of harmonious coexistence of the two great powers, playing an important stabilizing role in the modern world order, promoting peace and security in the region and the world at large. Further development of Chinese-Russian relations is of mutual interest for both countries and their peoples.

Axiological Indicators of the Quality of Higher Education

Key words and phrases: axiological approach; cognitive, activity-based and personality-oriented components of axiological approach; professional values; social self.

Abstract: The article substantiates the relevance of value-based approaches to education, clarifies the concept of "axiological approach to selecting educational content" in the context of professional training of university students. On the basis of the theoretical analysis, the author proposes axiological indicators of the educational content. They comprise cognitive, activity-based, and personality-oriented components. Their implementation in cohesion and interaction provides for the axiological development of a specialist.

page 20-23

A cognitive component of the axiological approach involves selecting educational content for the specialized disciplines with a focus on specific values, their structure and their relevance for professional and personal development of a specialist.

A personality-orientated component implies realization of an individual potential of a specialist to shape professional values and orientation in students through their social self.

Method for Solving a Problem of Flight Dynamics

Key words and phrases: conjugate system of equations; functional; mathematical model; optimization; variational method.

page 28-31

Abstract: A new variational method is used to solve the following problem: optimize the trajectory of the longitudinal motion of the mass center of aircraft flying in vertical plain from the initial point of atmospheric space to a predetermined point on the Earth surface. The main content of this work is that the complicated nonlinear boundary value problem was solved by a finite number of arithmetic operations. These results confirm the numerical simulation effective examination techniques.
